DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, drawn to an aircraft structure with a pair of coanda, classified in class 244, subclass 45R.
 - II. Claim 14, drawn to Aircraft control surface comprising a valve, classified in class 137, subclass 510.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the aircraft structure of invention I can be controlled by conventional control surfaces found on the coanda instead of a valve. The subcombination has separate utility such as a valve to control the airflow of an exhaust gas of an engine to prevent stalls.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
